Needle roller and cage assemblies

Features Needle roller and cage assemblies are single or double row units comprising cages and needle rollers. The single row design is based on DIN 5 405-1.

Very small cross-section height Since its radial section height is equivalent to the diameter of the needle rollers, needle roller and cage assemblies allow bearing arrangements requiring only a very small radial design envelope. They have high load carrying capacity, are suitable for high speeds and are particularly easy to fit.

If the raceways are produced to high geometrical accuracy, bearing arrangements with high runout accuracy can be achieved. The radial internal clearance can be influenced by the needle roller sort as well as by the shaft and housing tolerances.

Needle roller and cage assemblies require a hardened and ground raceway on the shaft and in the housing.

Double row Double row needle roller and cage assemblies are only available in particular enveloping circle diameters F_W . These are indicated by the suffix ZW.

Needle rollers Needle roller and cage assemblies are supplied with standard needle roller sorts in accordance with the table. However, each needle roller and cage assembly is fitted with needle rollers of one sort only. The sort is printed on the packaging and is colour coded, see table.

The sorts are indicated by the upper and lower deviation (in μm), the maximum diameter tolerance is $2 \mu\text{m}$, see table. In each case, two neighbouring needle roller sorts are matched as sort pairs.

Standard needle roller sorts

Sort pair Colour code	Needle roller sorts μm
Red	0-2 / -1-3
Blue	-2-4 / -3-5
White (grey)	-4-6 / -5-7

Operating temperature Needle roller and cage assemblies with a plastic cage can be used at operating temperatures from $-20 \text{ }^\circ\text{C}$ to $+120 \text{ }^\circ\text{C}$.

Needle roller and cage assemblies

Cages Needle roller and cage assemblies are available with plastic cages and sheet steel cages. Plastic cages have the suffix TV and are only available in particular sizes.

Other products Needle roller and cage assemblies are also available in designs for connecting rod bearing arrangements:

- series KZK for crank pin bearing arrangements
- series KBK for piston pin bearing arrangements.

These needle roller and cage assemblies are described in detail in TPI 94, Needle roller and cage assemblies for crank pins and piston pins.

Suffixes Suffixes for available designs: see table.

Available designs

Suffix	Description	Design
TV	Cage made from glass fibre reinforced polyamide 66 Bearings with plastic cage: see dimension table	Standard
ZW	Double row design (certain sizes only)	

Design and safety guidelines

Raceway design

Where needle roller and cage assemblies are to be used, the housing bore and the shaft raceway must be hardened and ground. The surface hardness of the raceways must be 670 HV + 170 HV, the hardening depth CHD or SHD must be sufficiently large.

Design of raceways, see table and section Design of bearing arrangements, from page 174.

Raceway design

Shaft diameter		Bore tolerance	Shaft tolerance			Roughness	Roundness	Parallelism
Nominal dimension mm			Bearing clearance					
over	incl.		Small	Normal	Large	max.	max.	max.
–	80	G6	j5	h5	g6	R _a 0,2 (R _z 1)	IT3	IT3
		H6	h5	g5	f6			
80	120	G6	h5	g5	f6	R _a 0,3 (R _z 1,6)		
120	–	G6	h5	g5	f6	R _a 0,4 (R _z 2,5)		
		H6	–	f5	e6			

Raceway width

The raceway width must be at least equal to the cage width B_c (B_c is produced with a minus (-) tolerance); values for B_c , see dimension tables. The distance between the axial limit surfaces should therefore be tolerated to H12, *Figure 1*.

The axial running surfaces for the needle roller and cage assemblies must be precision machined ($R_a 2$ recommended) and resistant to wear.

Figure 1
Raceway width
and axial running surfaces

Axial location

Needle roller and cage assemblies must be axially located. They are located by means of snap rings or appropriate design of the adjacent construction, *Figure 1* and *Figure 2*.

If location is by means of snap rings or retaining rings, a washer must be arranged in front of the ring. It must be ensured that there is sufficient interference between the ring and washer.

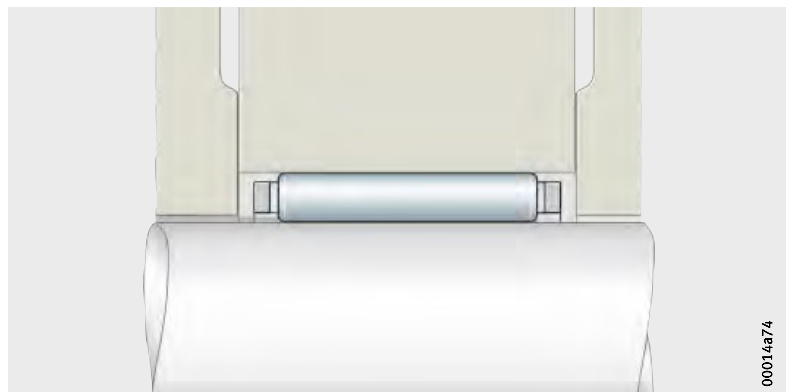

Figure 2
Axial location
by adjacent construction

Accuracy

The width of the needle roller and cage assembly $B_c^{-0,2/-0,8}$ corresponds to DIN 5 405-1.

Radial internal clearance

When standard needle roller sorts are used, a radial internal clearance of C2 to CN is achieved (radial internal clearance for needle and cylindrical roller bearings to DIN 620-4), if the shaft and housing tolerances according to table Raceway design, page 668, are observed.

If the actual values are on the plus side, a radial internal clearance of 0 can be achieved.

Needle roller and cage assemblies
